APPRECIATION

03/11/2015

I feel exceedingly happy and proud to put on record my sincere appreciation of Dr Arijit Das's innovative research on Chemistry. Within the short span of only three years he has been able to devise and innovate sixteen new methodologies and thirty six new formulae for easier and time-economic study of chemistry, improving upon work done already, at least in one case, by a nobel laureate. As already acknowledged by eminent national and international authorities on chemistry , Dr Das's works will go a long way in making the study of chemistry at all levels easy and delightful. I am sure in the coming days Dr Das will continue his path-breaking research in chemistry for the universal benefit of students, teachers and humanity at large. I sincerely wish him the greatest of success in life.
